Question #25: Please comment on how the instructor’s teaching helped your learning of the material in this course. Please give serious thought to your comments. Your comments will be studied by the professor after the grade and performance evaluation of your work have been submitted and may be used in changing future offerings of the course. In addition, these comments are placed in the instructor’s file and may be used for purposes of evaluating the instructor’s teaching. The information collected will remain anonymous.

- Really good professor.

- I really enjoyed the teaching style of this course. I feel like I learned many useful skills. Maybe it just came easy for me, but I learned more in this relaxed environment than any of the other high pressure courses I've taken. Miller's lectures were always very informative and engaging. 120B, Miller, and TAs made summer session as enjoyable as it can be.

- Great professor. Shows lots of engineering related material before lecture starts and is very engaging with students.

- In this class all the information given to me created an understandable environment in which I was able to complete the coursework with ease. All of the materials given to us such as the online interactive book, the videos, the links, class exercises all helped me complete class efficiently.

- Great Great class. Professor Bailey is a great instructor and an even greater person. I enjoyed all the cool videos that he showed before each class. He knew how to make the class interesting and keep people from not falling asleep. On a side note the only issue I had was the final project. Its not that one week wasn’t enough to get something done but I wanted to create an even better project and I could not have done it in one week. Overall great class. Thanks Bailey!!!

- Great instructor!

- More time needs to be spent on the implementation practice of usart and shift registers. Probably because this is a summer version of 120B is why we were unable to do so. Also 1 week for the final project lab is not enough time. During the regular quarter there is 3 weeks for the project. Overall thank you for your time and advice.

- I wish you would to teach this class more because I feel that the way you explain this material is excellent gave me much confidence in this class and also with the help of the TA’s of course. I appreciate the help and guidance for this class and thank you for making these 5 weeks go by fast.

- Summer is a tough time for taking this course. With respect to this, the instructor did good job getting through the course objective.

- I feel the instructor required a good amount of collaboration and self preparation from each student. In conjunction with the labs, the warm-ups and inspirational/motivational videos, I found that engaging in the class was more easily do able.

- Putting the lab, last homework, and final all within the span of four days is really annoying. Maybe you could space the days out more? The last lab alone probably saps up a lot of time, and having the last homework due only two days before and the final right after the lab is due doesn't help our priorities.

- The instructor helped me learn the material.

- Very effective instructor. He kept interest with regular videos that were both on topic and interesting. Extremely fair in his exams. I'd want to have him as an instructor for future courses.
