

```

int m, n;

misgreater()
{
    if (m = n) return m;
    else
    {
        m -= n;
        if (m > n)
            return misgreater();
        else
            return nisgreater();
    }
}

nisgreater()
{
    if (n = m) return n;
    else
    {
        n -= m;
        if (n > m)
            return nisgreater();
        else
            return misgreater();
    }
}

main()
{
    int x;

    read m, n;      --- assume that you read 15 and 12
    if (m > n)
        x = misgreater();
    else
        x = nisgreater();

    print x;
}

```
